                                                                                                                                                                                                                                                                                                                                                 cDNA from organophosphate (OP)-sensitive L. cuprina pupa cDNA library was amplified using cluster-specific esterase primers. Isolated clone LC743, a probable full-length cDNA, was expressed using a baculovirus vector in insect cells and shown to encode an OP-susceptible E3 esterase, useful in bioremediation.

                                                                       resistant enzyme acts as a malathion carboxylesterase and can be formulated for use in degrading environmental carboxylester or dimethyl general organophosphates.
                                                                                                                                              DNA molecule Lc743 (AAT68596) codes for an esterase (AAW17765) fa malathion susceptible strain of Lucilia cuprina. Comparison with a consensus sequence from derived from clones of the Lc-alpha-E7 resistant allele (see also AAW17768) indicated only replacement site difference, a Trp to Leu substitution at amino acid position 251 (nucleotide position 752). This mutation is a excellent candidate for the malathion resistance mutation. The
                                                                                                                                                                                                                                                                                                    Claim

RT-PCR was used to clone a cDNA allele of Lc-alpha-E7 (encoding OP-susceptible esterase E3 of L. cuprina) from a diazinon resistant strain, Llandillo 103. 4 Isolated clones were sequenced (Lc7L103 A-D, AAQ91562-65) that encoded diazinin-resistant esterases; a consensus sequence is given in AAQ91566.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1501
                                                            RT-PCR was used to clone a cDNA allele of Lc-alpha-E7 (encoding OP-susceptible esterase E3 of L. cuprina) from a diazinon resistant strain, Llandillo 103. 4 Isolated clones were sequenced (Lc7L103 A-D, AAQ91562-65) that encoded diazinin-resistant esterases. The esterases, or cells expressing them, are used
                                                                                                                                                                                                                                                 Pure E3 esterase fi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Malathion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mutation
A 1710 bp DNA molecule (AAT68597) comprises the Md-alpha-E7 coding sequence of the Musca domestica Rutgers strain. It was isolated by amplification of genomic DNA using alpha-esterase consensus primers (see also AAT68598-99) and use of a 534 bp amplicon to screen a genomic library of M. domestica. A amplicon of the gene, resulting in substn. of serine for tryptophan at amino acid position 251 (see also AAW17767), confers malathion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            29-MAY-1997

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLO1840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fifth.wipo.int/pub/published_pct_sequences.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLO1840-ABLI6175) and the encoded proteins expressed DNA sequences (ABLO1840-ABLI6175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   genes from Drosophila interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2001-656860/75

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1621

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Drosophila melanogaster.
                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB7777-ABB72072).
